autovnet 2024

This tool is competely optional and should only be used by red teamers that have prior experience with autovnet and have an advanced understanding of networking concepts and configurations. If you do not, please do not use this because we cannot provide support if you run into issues.

Your time would be better spent with reviewing the playbook attacks and practicing techniques for WAM1 and WAM2.

FYI, installation time can take over an hour. You should take a snapshot of your Kali VM before installation.
https://autovtools.gitlab.io/autovrtfm/autovnet-docs/setup/install/

Information for getting the configuration files needed for the competition network will be provided here on game day.
